

SAVE THE DATE

Networking the Networks | October 19-21, 2010

National Atmospheric Deposition Program Annual Meeting and Scientific Symposium
Lake Tahoe, California | Ritz-Carlton Highlands

And don't miss the Spring 2010 meeting, April 20-22, 2010

Memphis, Tennessee | The Peabody Hotel

NADP is an internationally recognized cooperative program that provides long-term records of high-quality precipitation chemistry to evaluate temporal and spatial trends in atmospheric deposition. Data from NADP networks are used in research on multi-pollutant source/receptor relationships, the status of deposition effects on terrestrial and aquatic ecosystems, and biogeochemical cycling of pollutants. These data also provide important feedback to policy makers on progress toward meeting the goals of the Clean Air Act.

The meetings are intended for scientists, policy-makers, resource managers and students interested in air quality, atmospheric deposition and its effects on natural resources and ecosystems. NADP subcommittee and executive committee meetings are held at the spring event. The fall event consists of NADP subcommittee meetings and the scientific symposium, including a poster session and reception.

Additional meeting information, including deadlines and registration fees, hotel reservation information, and agendas, will be posted on the NADP Web site as it becomes available.
